
Blog Subscription Update

In order to eliminate the ads that appeared on the email notifications of new blog articles I switched to a different app. In the process, the subscriber list was lost - *not to mention crashing the website for 24 hours!* If you subscribed to the blog prior to July, you are no longer subscribed and will not receive notifications of new articles. If you would like to receive these notifications, you will need to re-subscribe. I think you will like the new service better. I apologize for the inconvenience.

Benthic Macroinvertebrates - Water Quality Indicators

Find out what dragonflies, mayflies, rat-tailed maggots and snails can tell us about Lake Maxinkuckee water quality.

Raingardens A Beautiful Way to Improve Water Quality

Raingardens can help filter out pollutants in runoff and provide food and shelter for butterflies, song birds and other wildlife.

Native Landscaping 101

This in-Person workshop was held on July 14th at the Culver-Union library. There were several requests for a recording and slides. These are now posted on the [website](#).

This was the first attempt at recording and posting. Please bear with me as I fine-tune this skill set. I'm learning as I go.

DNR Survey

Indiana DNR notified LMEC of their 2020 survey of the lake. The fish survey was completed in June. Depth and vegetative mapping will be taking place in the coming weeks. The official document typically takes at least a year to be made public.

[Here is a report](#) from a neighboring lake that was recently made public. The Lake Maxinkuckee report would be something similar.
